

Expected emissions reductions from EU ETS industry for the EU's 2030 -55% climate target, along with decarbonisation levers to deliver those reductions

Figure ES.6

Agora Energiewende, 2020, based on data from European Commission, EEA, and Eurostat.

Note: Emissions that relate to industrial processes such a coking plants and power plants for industrial use are accounted for in the industry sector and not in the transformation sector. ETS emissions in 2005 are notional base-year emissions with respect to the 2030 target, i.e. they account for the change in the ETS scope and size of the EU since 2005.
