

Agora Energiewende/Wuppertal Institute, 2021, based on EEA GHG inventory data, 2021, and E-PRTR database, n.d.

* This includes the energy-related and process-related emissions of the iron and steel industry as specified in the EEA database. In addition to that, based on our own estimates another 35 MtCO_{2eq} for the production of coking coal and the power plants of the steel industry in the EU27 were added. Depending on who operates the coking plant and the power plant, these emissions are accounted under the categories 'Public Electricity and Heat production' and 'Manufacture of Solid Fuels and Other Energy Industries'. As they are directly linked to the iron and steel industry, we included them here.
